Indiana Limestone is a naturally occurring substance, generally gray or buff in color with no distinct odor or taste. This product is a naturally occurring substance that is not classified as a hazard as a solid. Dust created during cutting or fabricating can incur mild skin, eye or respiratory tract irritation hazards. Indiana Limestone dust is considered a nuisance dust. Laboratory tests using the NIOSH 7500 Analytical Method determined Crystalline Silica was Non Detect for this product. This product is not classified as a carcinogen. Eye Contact: May produce mild or moderate irritation or inflammation. Skin Contact: Direct contact may cause mild skin irritation due to abrasion or drying effects. Inhalation: Inhaled dust may cause respiratory irritation.
